

Consultancy Capability Statement

Environmental and natural resource management

Positioning

GAB is a Ghana-based operator with practical capability across agriculture, land-use planning, environmental management, natural resource management, GIS, drone mapping, satellite monitoring, and community-sensitive implementation.

Core services

Environmental and natural resource management; GIS, drone and satellite monitoring; Blue Carbon MRV; FPIC and community engagement; agribusiness systems advisory; project, risk and business analysis support.

Relevant capability

EOSDA and satellite monitoring workflows, field equipment use, soil and air quality monitoring, land documentation, wetland and mangrove assessment logic, safeguards and community engagement pathways.

Best-fit projects

Projects needing clear scoping, practical field assessment, spatial analysis, stakeholder engagement, implementation planning, or reporting for public agencies, private operators, development partners, and climate or natural resource programmes.
