

Partnership Reference Guide

Commercial agricultural partnership conversations

Purpose

This guide explains the partnership conversations GAB can consider. It is not a public securities offer and does not create a partnership by itself.

Models GAB can discuss

Farm lease arrangements where the partner brings capital and operating commitment.

Joint venture structures where land, infrastructure, market access, technical capacity, and risk are assessed together.

Buyer-led production arrangements where agreed demand supports production planning before perishable or seasonal supply is scaled.

What must be assessed

Partner fit, capital readiness, technical competence, market access, legal terms, land and operational due diligence, crop risk, insurance, logistics, governance, and exit terms.

How to begin

Use the website contact form and select Partnerships. Share the proposed model, location or market need, expected investment or offtake role, timeline, and decision maker details.
